

# Technical Data Sheet

## Microsil M80

Silica  
CAS# 7631-86-9

### Description

Silica beads are small, round balls of silica gel. While silica gel may sound like a soft or liquid material, it is actually a solid form of silicon dioxide, a natural material found in the earth (as Sand, etc.).

### Specifications

Item	Specification
Appearance	Dry, white powder
Loss on Drying (%) (110°C, 2hrs)	Max. 6.0
Particle Size ( $\mu m$ )	7 ~ 9
pH (5g/100ml aqua)	6.0 ~ 9.0
Oil absorption (ml/100g)	130 ~ 160
Pb (ppm)	Max. 10
As (ppm)	Max. 1

### Applications

These colorless beads are primarily used to control the moisture contents, especially, used in a number of cosmetic and household products from foundations to deodorants.

### Storage

Store in cool and dry place.
